

User Guide

1. All textures are prepared for Specular\Glossiness workflow in modern rendering engines like Vray and Corona renderer.
2. For correct results, load Albedo, Gloss and Reflection map to target slots and set IOR to 8,5.
3. We are not recommending to use Normal and Displacement maps simultaneously.
4. Normal maps usually work great in distance view since it consumes far less memory than displacement map.
5. Displacement maps are useful for close views but it can consume a large amount of memory. We are recommending to use 2D displacement if possible.
